

Status of pn Burst Mode for AO2

Only **few** observations in Burst mode during commissioning

- closed cal (Rev. 20)
- PSR 0540, but with CMCORR=256 (Rev. 35)
- Crab, but with CMCORR=256 (Rev. 40), see results
- closed cal, with CMCORR=512 (Rev. 45)
- ??

Conclusion:

- Burst Mode is **operational**
- may need fine tuning of lower threshold
 **schedule Crab observation**
- calibration still pending (**April/May** at Panter)
